1. Disclaimer

The audit makes no statements or warranties about utility of the code, safety of the code, suitability of the business model, investment advice, endorsement of the platform or its products, regulatory regime for the business model, or any other statements about fitness of the contracts to purpose, or their bug free status. The audit documentation is for discussion purposes only.

The information presented in this report is confidential and privileged. If you are reading this report, you agree to keep it confidential, not to copy, disclose or disseminate without the agreement of AZ EXPRESS RETAIL LLC. If you are not the intended receptor of this document, remember that any disclosure, copying or dissemination of it is forbidden.

Major Versions / Date	Description

2.1 Project Overview

Shopping.io was established as of December 2020. They are founded by dropshipping veterans with a vision to change how we make purchases with crypto. Shopping.io allows users to purchase goods directly from some of the leading ecommerce giants using over 100 different cryptocurrencies. To avail of this facility, all one has to do is sign up on Shopping.io by entering their email address and setting up the desired password. Once the account is created, they get access to a personal dashboard from which they can start searching and ordering stuff from the likes of Amazon, Walmart, eBay and more. The entire process from scratch takes no longer than a few minutes. Apart from the convenience of making payment in cryptocurrencies, customers on Shopping.io also stand to enjoy additional discounts and freedom from miscellaneous charges like shipping charges, sales tax, and more.

Shopping.io is in the constant process of developing and introducing new features for the cryptocurrency community. Some of the upcoming developments include the launch of its own token that offers an additional 5% discount and international shipping service to token holders. The platform will also be introducing new membership tiers after the conclusion of the limited period 10% discount offer on Free accounts. While users will still be able to purchase goods with cryptocurrencies using a free account, the discounts will be limited to Starter and Pro accounts at 5% and 10% respectively. All products shopped on Shopping.io, irrespective of account type will be eligible for 2-day free delivery within the United States along with a return/refund policy applicable for a maximum of 30 days from the date of delivery. Shopping.io will also be expanding its support for other leading ecommerce platforms including the upcoming AliExpress integration.

3. Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 – 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

4. Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

4.1 Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i. Review of the specifications, sources, and instructions provided to Chainsulting to make sure we understand the size, scope, and functionality of the smart contract.
 - ii. Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii. Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to Chainsulting describe.
2. Testing and automated analysis that includes the following:
 - i. Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii. Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

4.2 Used Code from other Frameworks/Smart Contracts

1. SafeMath.sol (0.6.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/master/contracts/math/SafeMath.sol>

2. ERC20.sol (0.6.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/master/contracts/token/ERC20/ERC20.sol>

3. IERC20.sol (0.6.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/master/contracts/token/ERC20/IERC20.sol>

4. Ownable.sol (0.6.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/master/contracts/access/Ownable.sol>

5. Context.sol (0.6.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/master/contracts/utils/Context.sol>

6. ERC20Capped.sol (0.5.0)

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/v2.5.0/contracts/token/ERC20/ERC20Capped.sol>

7. ERC20Mintable.sol (0.5.0)

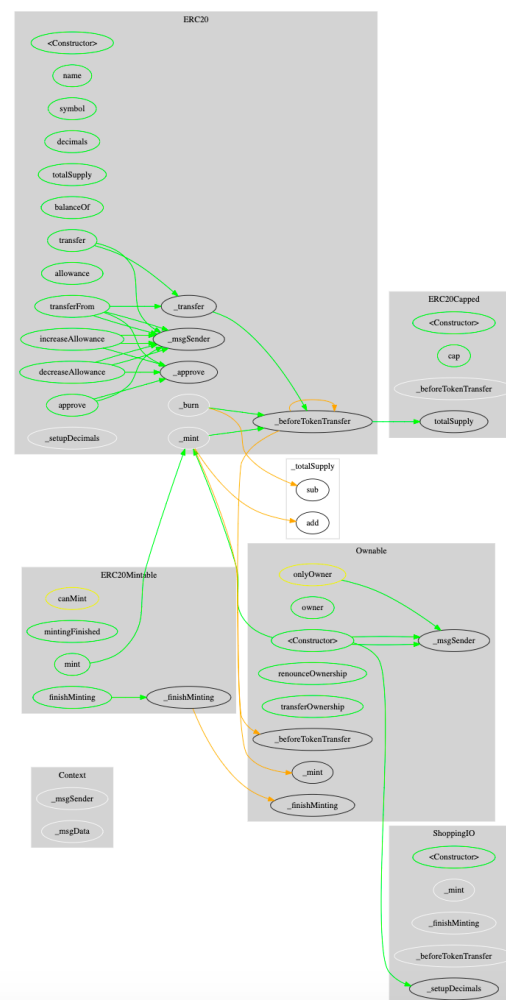

<https://github.com/OpenZeppelin/openzeppelin-contracts/blob/v2.5.0/contracts/token/ERC20/ERC20Mintable.sol>

4.3 Tested Contract Files

The following are the SHA-256 hashes of the reviewed files. A file with a different SHA-256 hash has been modified, intentionally or otherwise, after the security review. You are cautioned that a different SHA-256 hash could be (but is not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of the review

File	Fingerprint (SHA256)
spi_token.sol	406B0C962BCC951C62B1DC04F1D861DC1061F9E2211F7A9F67720EE2D9FF669

4.4 Metrics / CallGraph

4.5 Metrics / Source Lines

4.6 Metrics / Capabilities

Solidity Versions observed	 Experimental Features	 Can Receive Funds	 Uses Assembly	 Has Destroyable Contracts	
<div><div>^0.7.5</div></div>			**** (0 asm blocks)		
 Transfers ETH	 Low-Level Calls	 DelegateCall	 Uses Hash Functions	 ECTransfer	 New/Create/Create2

4.7 Metrics / Source Unites in Scope

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	spi_token.sol	7	1	786	735	237	464	172	
	Totals	7	1	786	735	237	464	172	

5. Scope of Work

The Shopping.io team provided us with the files that needs to be tested. The scope of the audit is the ERC20 Token contract (SPI)

Verify claims:

1. ERC-20 Token implementation
2. Developer cannot mint any new tokens.
3. Developer cannot burn or lock user funds
4. Developer cannot pause the contract

5.1 Manual and Automated Vulnerability Test

CRITICAL ISSUES

During the audit, Chainsulting's experts found **no Critical issues** in the code of the smart contract.

HIGH ISSUES

During the audit, Chainsulting's experts found **no High issues** in the code of the smart contract.

MEDIUM ISSUES

During the audit, Chainsulting's experts found **no Medium issues** in the code of the smart contract.

LOW ISSUES

During the audit, Chainsulting's experts found **no Low issues** in the code of the smart contract.

6. Executive Summary

Two (2) independent Chainsulting experts performed an unbiased and isolated audit of the smart contract codebase. The final debrief took place on the January 18, 2021. The overall code quality of the project is very good, not overloaded with unnecessary functions, these is greatly benefiting the security of the contract. It correctly implemented widely-used and reviewed contracts from OpenZeppelin and for safe mathematical operations.

The main goal of the audit was to verify the claims regarding the security of the smart contract and the claims inside the scope of work. During the audit, no issues were found after the manual and automated security testing.

7. Deployed Smart Contract

VERIFIED
